Calories, you can’t manage what you don’t measure.
The Quark RMR is a compact bedside indirect calorimetry solution designed to allow accurate and instantaneous estimation of Resting Energy Expenditure (REE) and respiratory ratio (R), in a non-invasive way, through the measurement of oxygen consumption (VO₂) and carbon dioxide production (VCO₂) together with other ventilatory parameters. Quark RMR allows also to identify metabolism substrate utilization (%FAT %PRO, %CHO) enabling thus improved nutrition support and accurate planning of nutritional therapies.

Quark RMR is a modern device designed both for research and bedside clinical applications. By measuring REE and providing the correct energy balance in critically ill patients, hospital may improve patient outcome, and decrease the length of hospitalization which will have a significant and immediate impact on hospital bottom line.

Quark RMR accuracy and reliability have been validated against the Gold Standard either with spontaneously breathing subjects and with mechanically assisted patients. Quark RMR was demonstrated to be unbiased, precise, reproducible, and accurate device for measuring energy expenditure.

- Measurement of Resting Energy Expenditure (REE) & Substrates
- REE by dilution with canopy
- REE breath by breath by mask
- Optional kit for measuring REE in mechanically assisted patients
- Suitable for patients above 15kg of weight
- Validated against the Gold Standard

Design

- Latest technology in gas analyzers: paramagnetic, stable and durable for the O₂; rapid infrared for the CO₂. Both analyzers are reliable and do not need maintenance for long periods.
- Multiple flowmeters choice (disposable pneumotach and multi-use turbine) to guarantee great accuracy on the different measurement modes (canopy, masks and through mechanical ventilation)
- Quick calibration procedures guarantee accurate measurements either on flow/volume (using the 3-liter calibration syringe) and gas concentration.
- Ideal for bedside applications Quark RMR compact dimensions and the optional medical graded cart configuration, make it the ideal choice for bedside applications.
- Powered by OMNIA software innovative user interface, touch screen ready, easy-to-use and self-explanatory.

REE on spontaneously breathing subjects

REE by dilution with Canopy Hood

The Quark RMR is supplied with a dilution helmet for the measurement of the expiratory flow of patients with spontaneous breathing. This method does not require a mouthpiece or facemask and is more comfortable for obese patients. Gas is sampled at the expiratory port through a sampling line, while the ventilation is measured by a turbine. The ventilation output of the helmet is easily regulated in order to maintain the CO₂ expired fraction (FeCO₂) within a prefixed range of values.

- Bidirectional digital turbine flowmeter (reusable)
- “Bubble” canopy hood (18,7 L) with removable blanket
- Integrated canopy blower pump inside the main unit (selectable flow rate)
- Internal emergency battery with acoustic alarms
- Optional canopy hood kit for pediatric use (15-30 kg)

REE breath by breath by Face Mask

In addition to canopy, Quark RMR provides "breath-by-breath" gas exchange analysis by using multi-use silicone facial masks (available in 5 sizes: 3 adult, 2 pediatric).

REE on mechanically ventilated patients

The optional ICU module for Quark RMR allows the integration with the ventilator for the measurement of REE in patients undergoing mechanically assisted ventilation in intensive care units. The module is extremely versatile allowing two different set-ups according to specific testing requirements.

In-line Measurement within Patient’s Circuit
- Disposable low-flow range PNT flowmeter (Flow-REE) inserted at the patient’s circuit
- “Breath by breath” gas sampling through a line connected proximally to the Y-piece of the ventilator tubing
- Inspiratory and Expiratory phases directly measured by the flowmeter
- All parts are single patient, no need for cleaning and disinfecting
- FiO₂ ≤ 70%
- Independent from type of ventilator

External Flow Measurement by Ventilator’s outlet
- Patient minute ventilation measured by a turbine flowmeter connected to the expiratory port of the ventilator
- “Breath by breath” gas sampling through a line connected proximally to the Y-piece of the ventilator tubing
- Software allows users to detect the “Bias Flow” and identifies the inspiratory and expiratory phases with the use of an algorithm based on flow and expiratory CO₂ analysis
- Easy and less invasive set-up
- Lower costs with less consumables
- Compatible with most of Ventilators in the market

Data Management & Software
Quark RMR comes with the Metabolic Module of OMNIA, the new software designed by COSMED. Compatible with the entire COSMED product range OMNIA allows the user to operate complex equipment without requiring long learning paths.
- Easy-to-use beautifully designed touch-screen (native) graphic user interface with intuitive workflow and hierarchy.
- Possibility to create user-defined dashboards with data, graphs and widgets.
- Select time interval to display averaged parameters (REE, RQ, variability, etc.) both in real time and in post analysis.
- Designed to work with both standard PC and tablets.
- SQL Database allowing virtually unlimited records and data safety.
- Full Network Database Management (optional). OMNIA allows installations in complex Server/Client environments.
- Multi-users access rights management (Principal Investigator, Physician, Technician, Administrator…) with event logging
- Compatible with Win 8 PRO (32/64), Win 7 (32/64), Win Vista (32/64). Mac OS compatibility when installed in Virtual PC OS (Parallel, VMware).

Options
- Exercise Testing Kit. With the optional CPET (Cardio Pulmonary Exercise Testing) module users can perform full exercise protocols to measure VO₂ and VCO₂ up to maximal effort.
- Ethanol burning kit. It consists of a lamp, parts and connectors to be connected to the Quark RMR. Burning Ethanol generates a predictable ratio of VO₂ and VCO₂ and it can be used to verify the accuracy of Respiratory Quotient.

Alternative REE measurement on spontaneously breathing subjects using a multi-use silicone face mask (5 sizes available)

± 0.02 %

± 0.02 %

Response time

120 ms

100 ms

Hardware

Dimensions & Weight

Unit: 17 x 30 x 45 cm/8 Kg

Canopy: 32 x 50 x 30 cm/0.6 Kg

Interface ports

USB A-B, RS-232, HR-TTL, SpO2

Electrical requirements

100-240V ± 10% 50/60 Hz

Internal emergency battery

12V; 1.2 Ah

Environmental conditions

Temperature 0-50 °C (32 - 122 °F); Barometer 400-800 mmHg; Humidity 0-100%

Software

OMNIA

Available languages

Italian, English, Spanish, French, German, Portuguese, Greek, Dutch, Turkish, Russian, Chinese, Korean, Romanian, Czech

PC Configuration

1.4 GHz or faster processor speed. Compatible with Vista (32/64), Windows 7 (32/64), Windows 8 (32/64), RAM 4GB (8GB recommended). 500 MB of free disk space
