Sleep Apnea screening device

ApneaStrip is a medical device that quickly, easily, and accurately screens patients for sleep apnea risk. ApneaStrip is an inexpensive device that you use at home that can determine your sleep apnea risk in just one night, and give you results in the morning.

- completely self contained
- uses medical grade adhesive
- a flashing green/or red light indicates low/high risk for sleep apnea
- has a sensitivity and specificity of 91% when compared to an in-lab polysomnography

3 EASY STEPS

- 1- Affix ApneaStrip under nose before going to sleep
- 2- Sleep with ApneaStrip for a minimum of 3 hours
- 3- Double click the activation button to receive the result

85% of sufferers are undiagnosed

Loud disruptive snoring is the most common sign of sleep apnea. Other warning signs include excessive daytime sleepiness, diabetes, weight gain and high blood pressure. Untreated, sleep apnea can lead to increased risk of heart attack and stroke.
